DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23, drawn to processes for extracting natural organic components from an organic material, classified in class 426, subclass 489, for example.
- II. Claims 24-25, drawn to a food preservative for animal feedstuffs comprising a mixture of a liquid, oily product and an edible oil, classified in class 426, subclass 54, for example.
- III. Claim 26, drawn to an essential oil product, classified in class 426, subclass 651, for example.

1. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the products of Groups II and III can be made using numerous conventional techniques for extracting/isolating/separating plant components from plants which do not necessarily include any or all of the steps recited in the processes of Group I.

Art Unit: 1651

The product of Group II is distinct from that of Group III because, as evidenced by the claims themselves, the product of Group II requires a mixture of a liquid oily product and an edible oil which is not required of the Group III product, and the product of Group III requires an essential oil, which is not required of the Group II product.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the response to this requirement, to be complete, must include an election of the invention to be examined even though the requirement be traversed.
